

Adding/Subtracting Fractions

Using Reducing Method to Find CD

1. Find a CD
2. Make = fractions
3. Add/subtract numerators
4. Bring down denominator
5. Simplify

Example $\frac{5}{18} + \frac{7}{24}$
find CD; $\frac{24}{18} = \frac{4}{3}$, ∴ CD is $3 \times 24 = 72$

$$\begin{array}{r} \frac{5}{18} = \frac{20}{72} \\ + \frac{7}{24} = \frac{21}{72} \\ \hline \frac{41}{72} \end{array}$$

Recall – to find the LCD when denominators are larger composite numbers, place the denominators over each other, simplify, then cross multiply.

Perform the indicated operation

1. $\frac{5}{18} + \frac{9}{24}$

2. $\frac{7}{12} + \frac{4}{15}$

3. $\frac{9}{27} + \frac{5}{18}$

4. $\frac{13}{16} - \frac{5}{24}$

5. $\frac{11}{16} - \frac{5}{24}$

6. $\frac{7}{15} + \frac{6}{25}$

7. $\frac{9}{32} + \frac{7}{48}$

8. $\frac{17}{24} - \frac{9}{40}$

9. $\frac{5}{18} + \frac{7}{45}$

10. $\frac{15}{16} - \frac{9}{40}$

11. $\frac{7}{20} + \frac{9}{35}$

12. $\frac{5}{8} + \frac{9}{28}$
