

Homework

A typical secondary math assignment in the United States looks like this:

Page 165, 1 – 30 odd

Homework should support and reflect instruction and notes.

A more appropriate homework assignment that would encourage studying would look more like this:

Read Sec 4.2 on Fractions

Define Fraction

Define Proper Fraction

Define Improper Fraction

Write the procedure for making equivalent fraction

Copy and redo examples 2 & 5 from the notes

Page 165; 1, 3, 4, 6, 11, 13, 14, 15, 19, 22, 29

N.B. - fewer exercises assigned.

Students who are unable to do the exercises are to copy all the examples and guided practice problems from their notes.
