## Median

The median, often used in finance, is the middle score when the data is listed in either ascending or descending order; $50 \%$ of the scores are above and $50 \%$ are below the median. If there is no middle score, then you take the two middle scores, add them and divide by 2 . It's also referred to as an average.

Find the median of $72,65,93,85$, and 55.
