

Range

The range is just the difference between the top score and the bottom score.

The larger the range, the less likely the mean can be depended upon as a good descriptor or predictor.

Find the range and the mean of the following:

Abe's scores 80, 80, 80
Ben's scores 70, 80, 90
Carl's scores 65, 75, 100
