Subtraction of Signed Numbers

We are going to define subtraction as finding the *__distance__* between two locations on the number line **AND** the way you have to travel to get to the first address. *Going right is still positive, going left is negative.*

EXAMPLE   Let's say I want to know how far you must travel if you were standing on (+8) and you wanted to go to the location marked as (–2). How far would you walk **AND** in which direction
