

# Homework

A typical secondary math assignment in the United States looks like this:

**Page 165, 1 – 30 odd**

A more appropriate homework assignment that would encourage studying would look more like this:

**Read Sec 4.2 Solving Linear Equations – 1 variable**

**Define Linear Equation**

**Write a strategy for solving linear equations in  $ax + b = c$  format**

**How do you solve an equation that is not in  $ax + b = c$  format**

**Explain the relationship between solving linear equations and the order of operations**

**Copy and redo examples 2 & 5 from the notes**

**Page 165; 1, 3, 4, 6, 11, 13, 14, 15, 19, 22, 29**

N.B. - fewer exercises assigned.

**Students who are unable to do the exercises are to copy all the examples and guided practice problems from their notes.**
